Your 1-Page Plan
Vizdale Full-Stack Developer Internship

Your Name	ABITHA M
Project	ClientLocker
Client	Vaigai Vel & Associates — an accounting firm in Madurai
Who will use it?	Partners, assigned staff, clients, and auditors who can access exactly 2 assigned clients.
Your How Might We, in your own words	How might we keep bank statements and invoices safely separated for each client, while making sure every person can open only the files they are allowed to see?
Your tool in one sentence	A secure client locker that stores bank statements and invoices separately, with role-based access, expiring download links, and a partner activity log.

#	5 things a user can do
1	Sign in and open the correct Partner, Staff, Client, or Auditor workspace.
2	Choose a client and view that client's Bank Statements or Invoices section.
3	Upload PDF, JPG, or PNG bank statements and invoices (partners and assigned staff only).
4	Open or download an allowed document using a secure link that expires after 10 minutes.
5	Manage staff access and review the record of file uploads, opens, blocked attempts, and access changes (partners only).

Your AI feature	Own Trained - AI Feature
Main screens	Partner: all clients, separate Bank Statements and Invoices lists, checklist, access controls, and activity log. Staff: assigned clients, both document sections, checklist, and upload. Client: own documents only. Auditor: view and open documents for exactly 2 assigned clients; no upload option.
Made-up data you will use	1 firm; 2 partners; 6 staff (including 1 trainee); 10 clients; 5 checklist items per client; 1 auditor assigned to exactly 2 clients; fictional bank statement and invoice PDFs/JPGs/PNGs for each sample client.
What worries you most?	Keeping each client's bank statements and invoices private; checking access on every server endpoint; making old download links fail immediately after access is removed; and recording blocked attempts correctly. AI must remain optional.
